

Statement on the EU Packaging and Packaging Waste Regulation (PPWR)

Dear valued Business Partner,

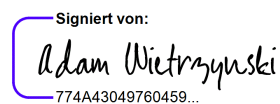

Innovative Sensor Technology IST AG supports the objectives of the European Union to reduce packaging waste and strengthen circular economy principles, as outlined in the Regulation on Packaging and Packaging Waste (Regulation (EU) 2025/40), which will repeal the current Packaging and Packaging Waste Directive (94/62/EC).

We are in close exchange with our suppliers to assess the compliance status of packaging materials and components with the aim of achieving alignment with the PPWR requirements across all applicable implementation phases of the Regulation. This includes evaluating relevant aspects such as substances of concern and heavy metal restrictions in packaging, material composition, recyclability performance, and the availability of required data for reporting and labelling.

Based on the information currently available to us, including declarations and compliance information received from our packaging suppliers, Innovative Sensor Technology IST AG is not aware of any packaging-related compliance issues concerning the PPWR requirements applicable from 12 August 2026. We continue to work closely with our suppliers to expand the technical information available for the packaging materials used by Innovative Sensor Technology IST AG in order to support transparent communication of compliance and material data to our customers.
